Classical logic:
Idea:
0 means "false"
1 means "true"
Operations:

```
\(\begin{array}{cclllll}P & Q & P \& Q & P \vee Q & P \rightarrow Q & P \leftrightarrow Q & \end{array} \quad P \quad \neg P\)
\(0 \quad 1 \quad 0 \& 1=0 \quad 0 \vee 1=1 \quad 0 \rightarrow 1=1 \quad 0 \leftrightarrow 1=0 \quad 1 \quad \neg 1=0\)
\(1 \quad 0 \quad 1 \& 0=0 \quad 1 \vee 0=1 \quad 1 \rightarrow 0=0 \quad 1 \leftrightarrow 0=0\)
\(1 \quad 1 \quad 1 \& 1=1 \quad 1 \vee 1=1 \quad 1 \rightarrow 1=1 \quad 1 \leftrightarrow 1=1\)
```

We will use a more compact form.
If $P=1$ and $Q=0$, then

So:

| $P$ | $Q$ | $P \& Q$ | $P \vee Q$ | $P \rightarrow Q$ | $P \leftrightarrow Q$ |  | $P$ | $\neg P$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 0 | 1 | 1 |  |  |  |
| 0 | 1 | 0 | 1 | 1 | 0 |  |  |  |
| 1 | 0 | 0 | 1 | 0 | 0 |  | 1 | 0 |
| 1 | 1 | 1 | 1 | 1 | 1 |  |  |  |

Constants:
$T=1$
$\perp=0$

Our first non-classical logic:
Idea:
00 means "false"
11 means "true"
01 is something intermediate between true and false
Operations:

| $P$ | $Q$ | $P \& Q$ | $P \vee Q$ | $P \rightarrow Q$ | $P \leftrightarrow Q$ |  | $P$ | $\neg P$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 00 | 00 | 00 | 00 | 11 | 11 |  | 00 | 11 |
| 00 | 01 | 00 | 01 | 11 | 00 |  | 01 | 00 |
| 00 | 11 | 00 | 11 | 11 | 00 |  | 11 | 00 |
| 01 | 00 | 00 | 01 | 00 | 00 |  |  |  |
| 01 | 01 | 01 | 01 | 11 | 11 |  |  |  |
| 01 | 11 | 01 | 11 | 11 | 01 |  |  |  |
| 11 | 00 | 00 | 11 | 00 | 00 |  |  |  |
| 11 | 01 | 01 | 11 | 01 | 01 |  |  |  |
| 11 | 11 | 11 | 11 | 11 | 11 |  |  |  |

Constants:
$\top=11$
$\perp=00$
